NP_001103265.1|alpha-2-macro-globulin precursor [Bos taurus]
GSGGTAEHPFTVEEFVLPK

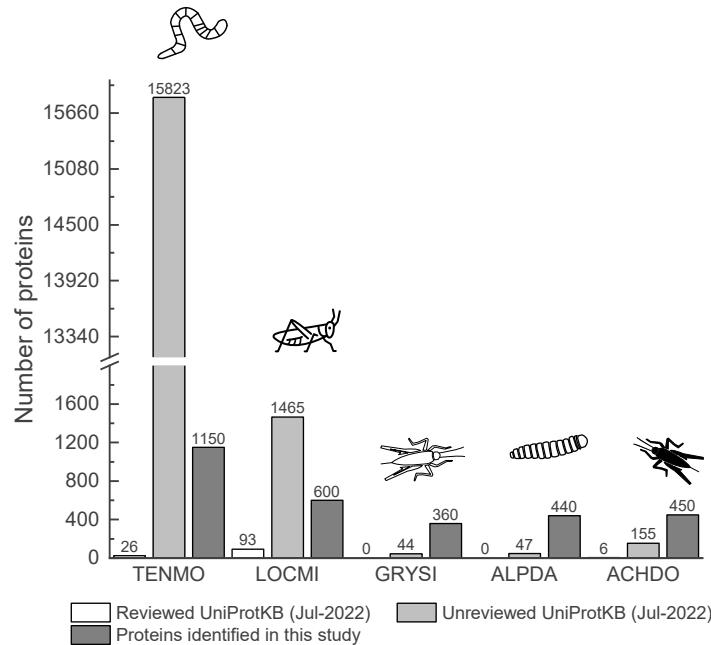

Unique:

Exists in only one target species
Not existent in livestock species
Not existent in other arthropods besides insects

Might exist in a small number of other insects

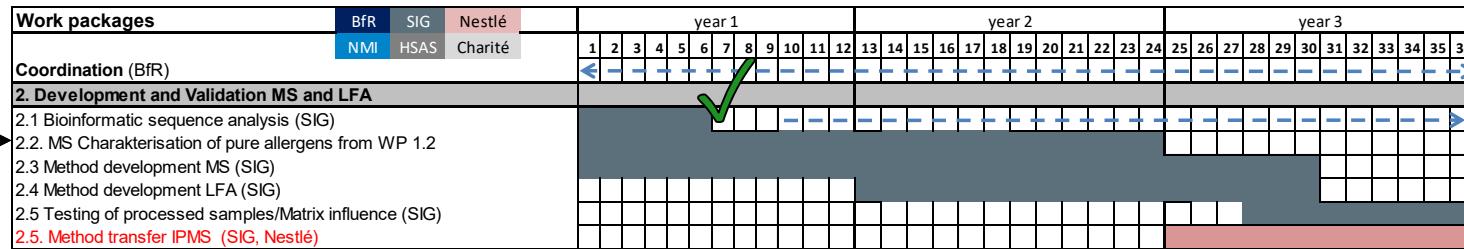

EXPANSION OF KNOWN PROTEOMIC DATA > POTENTIAL SPECIES MARKER

Species	Protein name	Icon
<i>Tenebrio molitor</i>	Larval cuticle protein F1	
<i>Locusta migratoria</i>	Vitellogenin A	
<i>Gryllodes sigillatus</i>	Arginine kinase, Spermatophylax protein C	
<i>Alphitobius diaperinus</i>	Larval cuticle protein A3A, Hemocyanin C	
<i>Hermetia illucens</i>	Cuticle protein, Superoxide dismutase	
Insecta	Tropomyosin

SIGNATOPE

WHAT ABOUT ALLERGENICITY? - PRICK SOLUTIONS

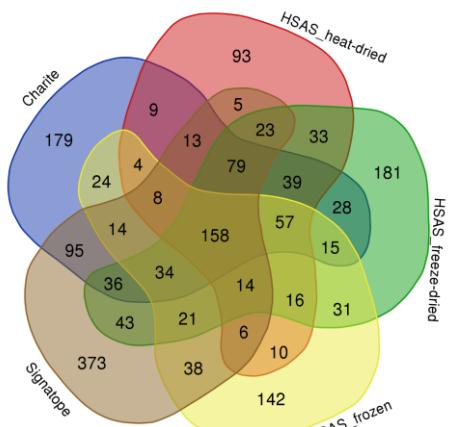

HOMOLOGUE ALLERGENS WERE IDENTIFIED

Similar IDs of proteins

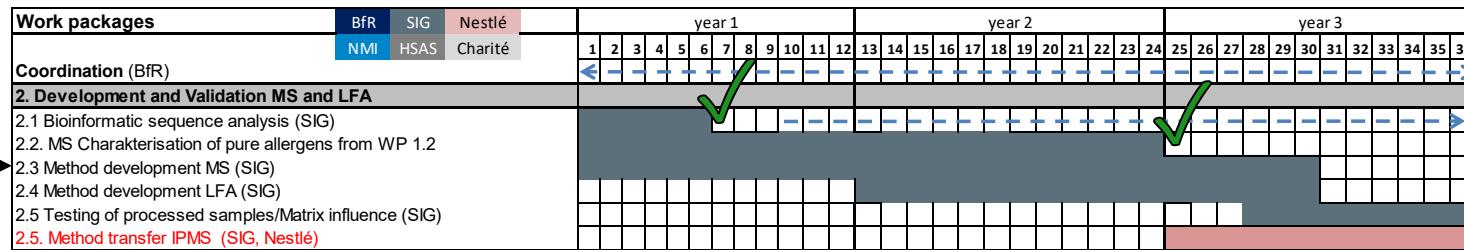

Strong overlap in all samples, Direct tryptic digestion leads to more/different IDs

Identified homologue allergens

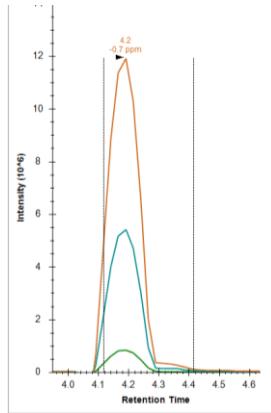

Alpha-amylase	Heat shock proteins
Arginine kinase	Paramyosin
Chitinase	Profilin
Cytochrome C	Thioredoxin
Ferritin	Tropomyosin
Glutathione S-transferase	Troponin

- WP 2.1 – Identification of species marker peptides in non-sequenced species
 - WP 2.2 – MS Characterisation of pure allergens
 - WP 2.3 – Method development of an immunoaffinity LC-MS/MS assay
 - WP 2.4 – Method development of a lateral flow assay
 - WP 2.5 – Testing of processed samples

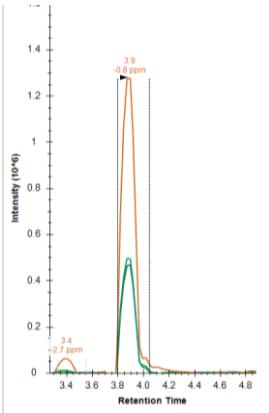

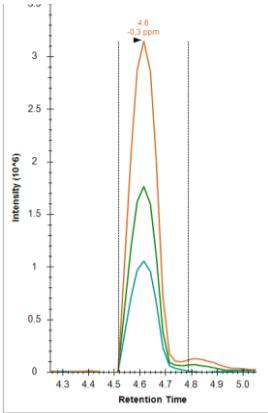

INSECT MARKER DISPLAY SHARP PEAKS IN ENDOGENOUS SAMPLES

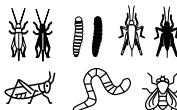

Arginine kinase
G. sigillatus
Also found in one ant

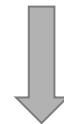

Spermatophylax protein C
G. sigillatus
unique

Tropomyosin
Insecta

- PRM analyses of insect digests
- Confirm *in silico* and in-house proteomic results

Generation of standard peptides for quantification and antibodies

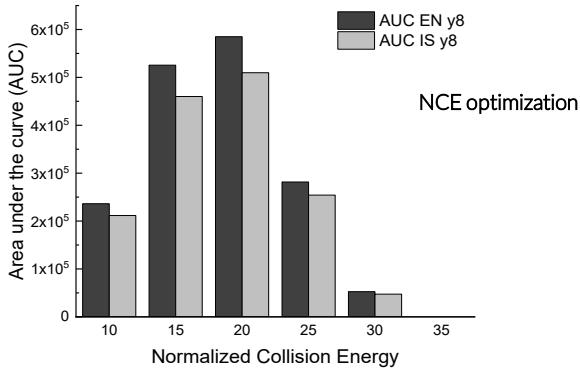

MS OPTIMIZATION LEAD TO SPECIFIC AND STRONG SIGNALS

- Check antibody specificity
- No cross-reactivities observed

		Antibody specificity in SIS mix

- Collision energy optimization
- NCEs with highest peak intensities could be determined

GRADIENT OPTIMIZATION LED TO FAST SAMPLE ANALYSIS

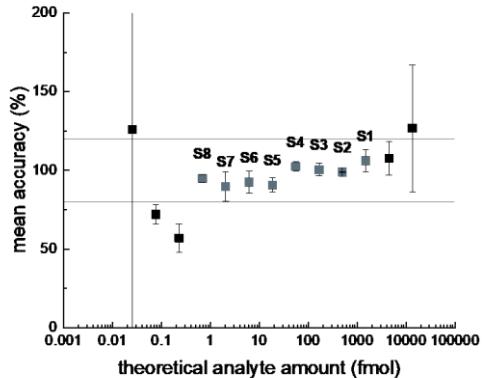

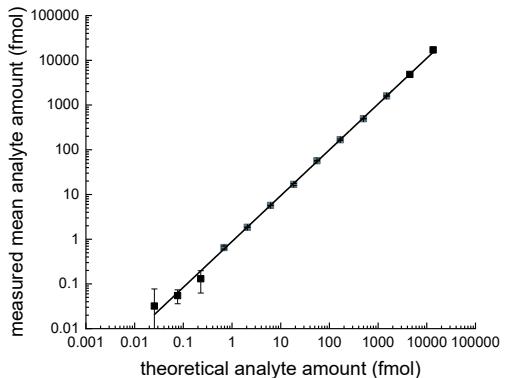

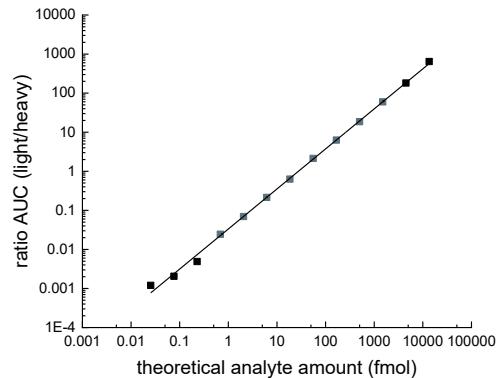

Optimal separation and run time identified from 10 different gradients

Cycle time of 6 min

CALIBRATOR OPTIMIZATION LED TO ROBUST STANDARD CURVES

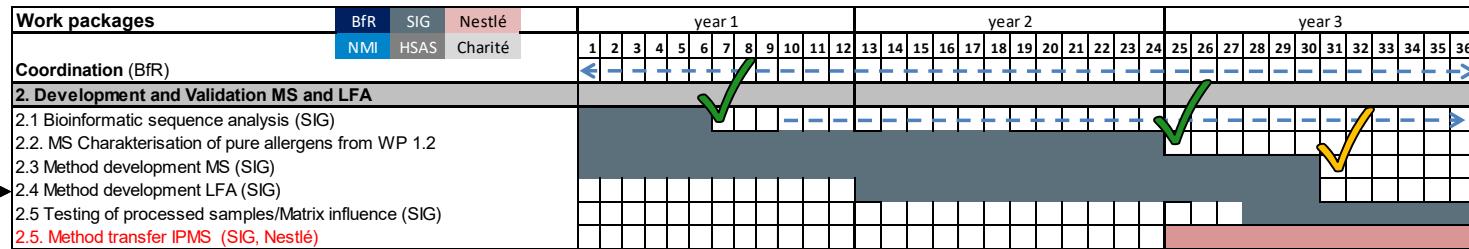

Quantification possible through eight calibrator levels

S1-S8, range 0.69 fmol – 1500 fmol, 80-120 % accuracy

INSECT SPECIES MARKER QUANTIFIABLE IN INSECT SAMPLES

Insect species marker

Species	Identifier	Mean amount (mg/g insect) (n=3)	SD (n=3)
GRSYI	AK	0.28	0.06
GRSYI	SP1C	0.50	0.02
HERIL	HICP	0.04	0.00
ALPDA	HCC	4.59	0.32
ALPDA	LCPA3A	6.27	0.61
TENMO	LCPF1	0.005	0.001
LOCMI	VTGA	22.02	2.93

Generic insect marker

Tropomyosin is similar abundant in all species except *Hermetia illucens*

INSECT SPECIES MARKER OBSERVABLE IN PROCESSED FOOD SAMPLES

Species	Identifier	Mean amount ($\mu\text{g}/\text{mg insect}$) (n=3)	Observable in which cookie sample?	Mean amount protein (ppm)	Expected amount (ppm)
GRSI	AK	0.28	100 ppm	0.010	0.008
GRSI	SP1C	0.50	20 ppm	0.001	0.012
HERIL	HICP	0.04	20 ppm	0.002	0.0009
ALPDA	HCC	4.59	100 ppm	0.062	0.11
ALPDA	LCPA3A	6.27	100 ppm	0.005	0.17
TENMO	LCPF1	0.005	-	-	0.0001
LOCMI	VTGA	22.02	-	-	0.48
INSECTA	TPM	4.96*	600 ppm	0.292	0.605

* Mean of five insect species

Processed cookie samples

→ Some insect marker were observed in 120 ppm but not in 600 ppm cookies

→ Improvement of sample homogeneity required

- WP 2.1 – Identification of species marker peptides in non-sequenced species
- WP 2.2 – MS Characterisation of pure allergens
- WP 2.3 – Method development of a immunoaffinity LC-MS/MS assay
- WP 2.4 – Method development of a lateral flow assay
- WP 2.5 – Testing of processes samples

2.4 Method development LFA (SIG)							
2.5 Testing of processed samples/Matrix influence (SIG)							
2.5. Method transfer IPMS (SIG, Nestlé)							

The Gantt chart illustrates the project timeline across three years (Year 1, Year 2, Year 3) with 36 weeks each. Work packages 2.1 through 2.5 are listed vertically on the left. A grey shaded area covers weeks 8 to 32. Green checkmarks are placed at weeks 8 and 24. A yellow checkmark is at week 35. A red 'X' is at week 33. A final yellow checkmark is at week 36.

OUTLOOK

- Test assay in other food samples
- Further assay improvements
- Recovery tests in different food matrices for tropomyosin
- Test *in vitro* digested food samples for allergenicity
- Assay transfer to Nestlé
